Salesforce change owner send notification email template. Salesforce custom email template example. New email address announcement template. New service announcement email sample. Prometheus alertmanager custom email template.

Skip to first unread messageunread,Jul 28, 2017, 6:27:13 PM7/28/17Sign in to reply to authorYou do not have permission to delete messages in this groupSign in to report message as abuseEither email addresses are anonymous for this group or you need the view member email addresses permission to view the original messageHi All,I still cannot realize how I can apply my own custom html template for e-mail alert in alert-manager config. Currently, I receive an empty e-mail alert.Can you help me with that?My current config alert-manager config:html: '{{ define "email.tpl" }} {{ end }}{{ template "email.tpl" . }}'I receive the following error although email.tpl exists in that folder.ERROR[16307] Notify for 1 alerts failed: Cancelling notify retry for "email" due to unrecoverable error: executing email html template: html/template:1:48: no such template "/etc/alertmanager/template/email.tpl" source="dispatch.go:261"Thanks in advance.unread,Jul 31, 2017, 6:29:10 AM7/31/17Sign in to reply to authorYou do not have permission to delete messages in this groupSign in to report message as abuseEither email addresses are anonymous for this group or you need the view member email addresses permission to view the original messageHi,There are three changes required for having email notifications sent using custom email template) Email Template file placed in some folder. In the below code snippet, I'm placing the email.tpl template file under /etc/prometheus/alertmanager/template folder. A sample email.tpl file can be sourced from github here:2) I have renamed the above file as email.tpl and modified the contents of email.tpl with define {{ "email.html" }} & {{ end }} tags to the top & bottom section of email.tpl file. Renaming is done just for better understanding & is not mandatory. If you chose to use it as is, make sure you refer the template file as *.html in your templates: section in alertmanager.yml file.3) Modify the contents of alertmanager.yml file per below: global: smtp smarthost: "your-smtp-server:25" smtp from: "fr_@emalldomain.com" templates: - /etc/prometheus/alertmanager/template/*.tpl route: receiver: default email configs: - name: default email configs: - to: 'l_@emalldomain.com' require tls: false html: '{{ template "email.html" . }}'Hope the above helps.unread,Jul 31, 2017, 12:53:53 PM7/31/17Sign in to reply to authorYou do not have permission to delete messages in this groupSign in to report message as abuseEither email addresses are anonymous for this group or you need the view member email addresses permission to view the original messageThanks a lot for your help, but it still doesn't work although I performed all steps you mentioned. Still I get an empty e-mail and when I open it via right-click I see an empty email with email.txt file name on it.It looks like a bug in alertmanager source code.unread,Aug 1, 2017, 10:36:48 AM8/1/17Sign in to reply to authorYou do not have permission to delete messages in this groupSign in to report message as abuseEither email addresses are anonymous for this group or you need the view member email addresses permission to view the original messageI have seen this behaviour with AlertManager and the blank messages usually appear when the email template has errors in it. Can you please run the Alert Manager in DEBUG mode (using -log.level debug) and check. If the error is related to bad template, it would appear in the log messages.unread,Aug 1, 2017, 11:54:42 AM8/1/17Sign in to reply to authorYou do not have permission to delete messages in this groupSign in to report message as abuseEither email addresses are anonymous for this group or you need the view member email addresses permission to view the original messageThis is what I get from debug logging:DEBUG[12710] flushing [Average CPU Load On All Cores][61856:inactive]] agrGroup=1/(service=--*(?:^.*\$*)):{alertname="Average CPU Load On All Cores"} source="dispatch.go:425"DEBUG[12710] Notify attempt 1 for "email.tpl" failed: executing email html template: html/template:1:12: no such template "email.tpl" source="notify.go:585"ERROR[12710] Error on notify: Cancelling notify retry for "email.tpl" due to unrecoverable error: executing email html template: html/template:1:12: no such template "email.tpl" source="notify.go:283" I changed this file name into email.html and nothing helps. I set access rights to the folder where it resides to 777 and set the access rights to this file as 777 and nothing helps. Still I can see an empty e-mail.I think this is a bug. The problem is that alert manager doesn't even find this template. If template would be incorrect then I would see errors like you have a syntax error or bad character error as well. But I have never seen it which means the issue is in golang code. My template is correct and I'm able to open it in browser.It doesn't even differ very much from a default html template only with background color and picture in it.I spent a lot of time trying to get this working. But nothing helps. unread,Aug 1, 2017, 1:23:10 PM8/1/17Sign in to reply to authorYou do not have permission to delete messages in this groupSign in to report message as abuseEither email addresses are anonymous for this group or you need the view member email addresses permission to view the original messageCan you paste/show the contents of your email.tpl/email.html file and alertmanager.yml configuration? The alert manager error says it's not able to find email template.unread,Aug 2, 2017, 12:36:12 PM8/2/17Sign in to reply to authorYou do not have permission to delete messages in this groupSign in to report message as abuseEither email addresses are anonymous for this group or you need the view member email addresses permission to view the original messageYes, I have attached yml config file and html template. Please check whether everything is correct. unread,Aug 2, 2017, 2:30:40 PM8/2/17Sign in to reply to authorYou do not have permission to delete messages in this groupSign in to report message as abuseEither email addresses are anonymous for this group or you need the view member email addresses permission to view the original messageThe templates: section in alertmanager.yml does not point to email.tpl (- /etc/alertmanager/template/*.tpl) file. Can you replace it with below line & give it a try? /etc/alertmanager/template/email.tplunread,Aug 2, 2017, 3:33:11 PM8/2/17Sign in to reply to authorYou do not have permission to delete messages in this groupSign in to report message as abuseEither email addresses are anonymous for this group or you need the view member email addresses permission to view the original messageI tried so many times different configurations but no luck.The parser throws an error message when you modify -template clause and trying to place the full file name email.tpl:INFO[183114] Loading configuration file failed: template: email.tpl:1: unexpected in define clause file="/.alertmanager.yml" source="main.go:224"ERROR[183114] Loading configuration file failed: template: email.tpl:1: unexpected in define clause file="/.alertmanager.yml" source="main.go:224"But when it's removed then everything is fine.I will report a bug for the development team since I was researching the source code and found some bugs in it.Thanks for your help anyway.unread,Aug 2, 2017, 4:47:20 PM8/2/17Sign in to reply to authorYou do not have permission to delete messages in this groupSign in to report message as abuseEither email addresses are anonymous for this group or you need the view member email addresses permission to view the original messageunread,Oct 21, 2021, 4:07:00 PM10/21/21Sign in to reply to authorYou do not have permission to delete messages in this groupSign in to report message as abuseEither email addresses are anonymous for this group or you need the view member email addresses permission to view the original messageHi All,I'm getting same error as above as I'm trying to create custom template for email. Is there any solution available now?ERROR[16307] Notify for 1 alerts failed: Cancelling notify retry for "email" due to unrecoverable error: executing email html template: html/template:1:48: no such template "/etc/alertmanager/template/email.tpl" source="dispatch.go:261" Modified on: Mon, 7 Feb, 2022 at 4:24 AM [Supported since Kublr KCP 1.22.1]In Kublr 1.22.1 support is introduced for configuring Alertmanager email templates via Kublr cluster specification.Create custom email template>Create file customemail.tpl with content like {{ define "email.default.subject" }} {{ template "subject" . }} {{ end }} {{ define "SOME_DEFINED_NAME" . }} . Here is your email template. _Add custom html template as ConfigMapThe next step is to use kubectl to add your custom template as ConfigMap to Kublr namespace:kubectl create configmap -n kublr email-custom-template --from-file=/customemail.tplModify cluster specThe last step is to modify cluster specification (see example below) and push Validate and Update button. values: alertmanager: config: default_receiver: email extraTemplatesConfigmaps: - fileMask: *.tpl name: email-custom-template receivers: - name: email email_configs: - to: email@example.com from: from_email@example.com smarthost: SMTP_HOST_ADDRESS auth_username: SMTP_LOGIN auth_identity: SMTP_IDENTITY auth_password: SMTP_PASSWORD html: {{ template "SOME_DEFINED_NAME" . }}Multiple template files may be added in a ConfigMap (with different file names) as well as multiple ConfigMaps can be used.
